The purpose of this proposed amendment is to consider modifications to the recreational management program for summer flounder, scup, black sea bass, and bluefish. Specifically, this action may consider options for managing for-hire recreational fisheries separately from other recreational fishing modes (referred to as sector separation), as well as options related to the collection and use of recreational data, such as private angler reporting and enhanced for-hire vessel trip reporting requirements.

The Commission and Council are currently conducting scoping for this action. Scoping is the first and best opportunity to provide input on the scope of issues to be addressed. There will be additional comment opportunities; however, input provided early in the development of this action will help the Council and Commission identify issues of concern and determine which types of management alternatives should be further developed.

The Public Information/Scoping Document provides a broad overview of the issues identified for consideration in the amendment, management approaches that may be considered, and a series of questions to guide public comment on this amendment. This document, along with additional information and updates, is available on the Council's [action page](#) or the Commission's [public input page](#).
